Certainty Software Version 4.3 Release Notes	1
Overview	2
SSO for Certainty Mobile App	2
Security Updates	2
Bug Fixes	2

Overview

The 4.3 release is a small update focused on improvements for security and SSO.

New features in this release

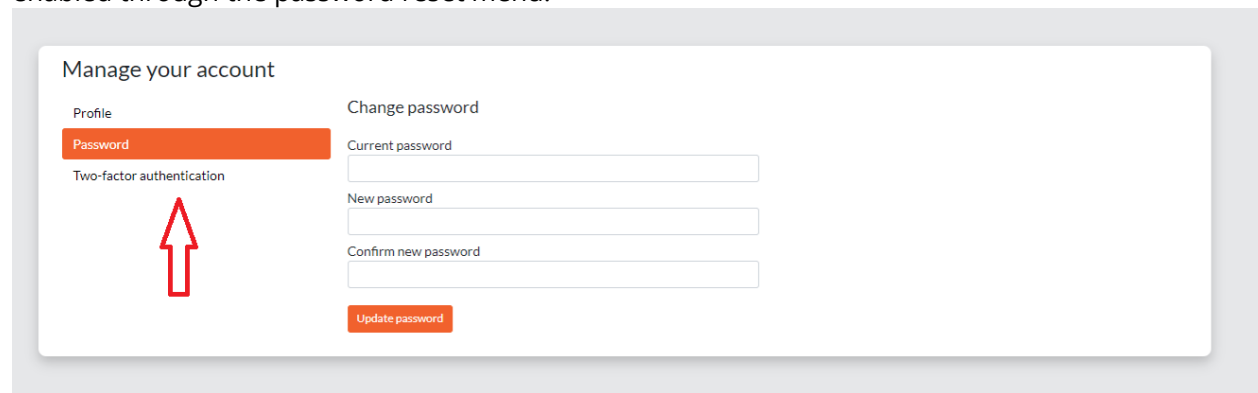

- ✓ SSO for users of the Mobile App
- ✓ Security Updates
- ✓ Bug Fixes

SSO for Certainty Mobile App

Previously only available to admin users, or users of the browser version of the app, we have implemented SSO for mobile app users. Just like with our previous SSO systems, SSO for the app is an 'on request' system that integrates with your existing SSO infrastructure. This feature will critically allow your users to use the app's offline mode while on SSO, so long as they sign in while connection to the internet is available.

Security Updates

Many security features have been improved throughout Certainty, while most of these will not affect general use of the system, users will now have multifactor authentication as an optional feature, enabled through the password reset menu.

The screenshot displays the 'Manage your account' page. On the left, there is a sidebar with three options: 'Profile', 'Password' (which is highlighted with an orange background), and 'Two-factor authentication'. A red arrow points from the 'Two-factor authentication' option towards the main content area. The main content area is titled 'Change password' and contains three input fields: 'Current password', 'New password', and 'Confirm new password'. Below these fields is an orange button labeled 'Update password'.

Bug Fixes

Various minor bug fixes.
